ELECTROSTATIC PROPERTIES - COMPLIANCE AND RESPONSIBILITY
▪ Garments are anti-statically treated and comply to the electrostatic protection required by EN 1149-5, and must be used with compatible accessories and work practices to be effective.
▪ Electrostatic dissipative protective clothing to EN 1149-5 shall meet at least one of the following requirements. • Half Decay Time [t50] < 4s or Shielding Factor [S] > 0.2, tested according to EN 1149-3:2004, test method 2 (induction charging), or • A Surface Resistance of less than or equal to 2.5 x 109 Ω, on at least one surface, tested according to EN 1149-1.
▪ The person wearing the electrostatic dissipative protective clothing shall be properly earthed. The resistance between the person and the earth shall be less than 108 Ω, e.g. by wearing adequate footwear.
▪ Electrostatic dissipative protective clothing shall not be opened or removed whilst in the presence of flammable or explosive atmospheres or while handling flammable or explosive substances.
▪ Fasten the garment correctly, covering all non-complying materials. Where the garment is to be earthed through the skin, ensure that the cuffs are in contact with the skin at all times.
▪ Electrostatic dissipative clothing shall not be used in oxygen enriched atmospheres without the prior approval of the responsible safety engineer.
▪ The electrostatic dissipative performance of the electrostatic dissipative protective clothing can be affected by wear and tear, laundering and possible contamination.
▪ Electrostatic dissipative protective clothing shall permanently cover all non-complying materials during normal use, [including bending and movements].
▪ Not intended to protect against mains voltage.
